

Think Fleet First.

Equipment Protection Systems

Our leadership in the high efficiency boiler system and large pump market includes design assistance, fully integrated system design, and controls and instrumentation.

HEAT TRACING & CONTROLS

Raychem

XL-Trace freeze protection systems for exterior piping. Heater cables up to 20 Watts/Ft and 277VAC. Monitoring and control systems for mission critical applications.

XL-Trace pipe temperature maintenance for grease disposal and fuel oil piping flow control.

ElectroMelt snowmelting systems for walkways and driveways. heater cables up to 40 Watts/FT and 277VAC.

Icestop roof and gutter de-icing systems. UV stabilized jacketing provide long life under harsh conditions.

RaySol high intensity floor heating for luxury bathrooms.

QuickNet floor warming for thin-set bathroom tile applications.

RaySol mid intensity floor warming for comfortable floor temperatures above unheated areas such as loading docks and parking garages.

RaySol low intensity freezer frost heave prevention for commercial freezers.

POWERLINE MONITORING

Intech 21

HCCM-2100 distributed temperature sensing and heat trace monitor and control systems without dedicated control wiring.

Approved and used for NYCTA and federal agency life safety freeze protection applications.

WATER DETECTION

Tracetek

Total system design for the mission critical water detection environment. Networked systems integrate sensor cables and spot detectors into stand-alone or building automation systems with Johnson Metasys N2 open system devices.

Water detection for data centers, communication equipment rooms, trading floors and critical commercial workspaces.

Water detection for museums, libraries and archive storage facilities.

Water detection for RPZ backflow prevention installations and foundation wall monitoring.

Oil and chemical detection systems for double wall underground piping and storage tanks, and EPA and NYDEP environmental protection applications.

Direct buried applications for transportation pipeline applications governed by USDOT requirements.

Con Edison transformer vault oil detection and drain valve control systems.

CUSTOM APPLICATION & DESIGN

Specialty Application

For specialty applications such as snowmelting and de-icing of architectural details, and sloped decorative surfaces.
